

1P: [Direct] Shipper API Integrations Process

Stage 1: Technical Discovery: Amazon Shipping API Documentation

Please find below all the relevant documentation links to initiate the API integration process. For further clarification or a more detailed understanding, feel free to reach out to the Amazon Shipping Team.

- Amazon Shipping [APIs](#)
- Shipment Creation [Workflow](#)
- Push Notifications ([WebHook](#))
- API [Explorer](#) | API [Tutorials](#) | Postman [Collections](#)
- Frequently Asked Questions ([FAQs](#))

Stage 2: Developer Profile Setup & DIV (Developer Identity Verification) Process

To consume the Amazon Shipping APIs, the shipper/integrator must register as a developer within Amazon's ecosystem via Developer Central Portal: <https://developercentral.amazon.com>. As part of the registration process, the developer is required to submit a personal identity document (e.g., national ID) along with a secondary document. Additionally, video verification is needed to complete the developer profile.

- Creating [Developer Central profile](#)

Stage 3: DRAF Submission (Developer Registration and Assessment Form) & App Creation for API Credentials

Upon successful completion of the DIV, the shipper/integrator must complete the Developer Registration Assessment Form (DRAF), ensuring adherence to the following policies:

- [Guide to fill DRAF](#)
- [Amazon Services API Developer Policy](#)
- [Data Protection Policy \(DPP\)](#)
- [Acceptable Use Policy \(AUP\)](#)

After submission and successful approval of the DRAF, the shipper/integrator will create a Seller Partner (SP-API) application to obtain the required credentials—*Client ID, Client Secret, and Refresh Token [Prod & Sandbox]*—for accessing the Amazon Shipping APIs.

Stage 4: Shipper API Integration Development

The Amazon Shipping Integrations Team will assist shippers through their API integration Development phase by providing dedicated on-call support and technical guidance on the APIs

Stage 5: Integration Testing: Joint UAT (User Acceptance Testing)

The Shipper/Integrator will validate the integration flow during the on call with Amazon Shipping Integration. Please note that if the system is moved to production without this mandatory testing, the Amazon Shipping Integration team will not be responsible for any resulting errors.

Stage 6: Go-Live and Launch!

Once all checks and tests are successfully completed, the shipper may proceed to go live upon confirmation from the Amazon Shipping Integration team.

Thank you for partnering with us. We're excited to have you on board to experience Amazon Shipping India API — designed to simplify and streamline your shipping operations. Please feel free to reach out to Amazon Shipping Team in case of any questions/support.

Happy shipping and success ahead!
